

Church Refurbishment Update

26/6/23

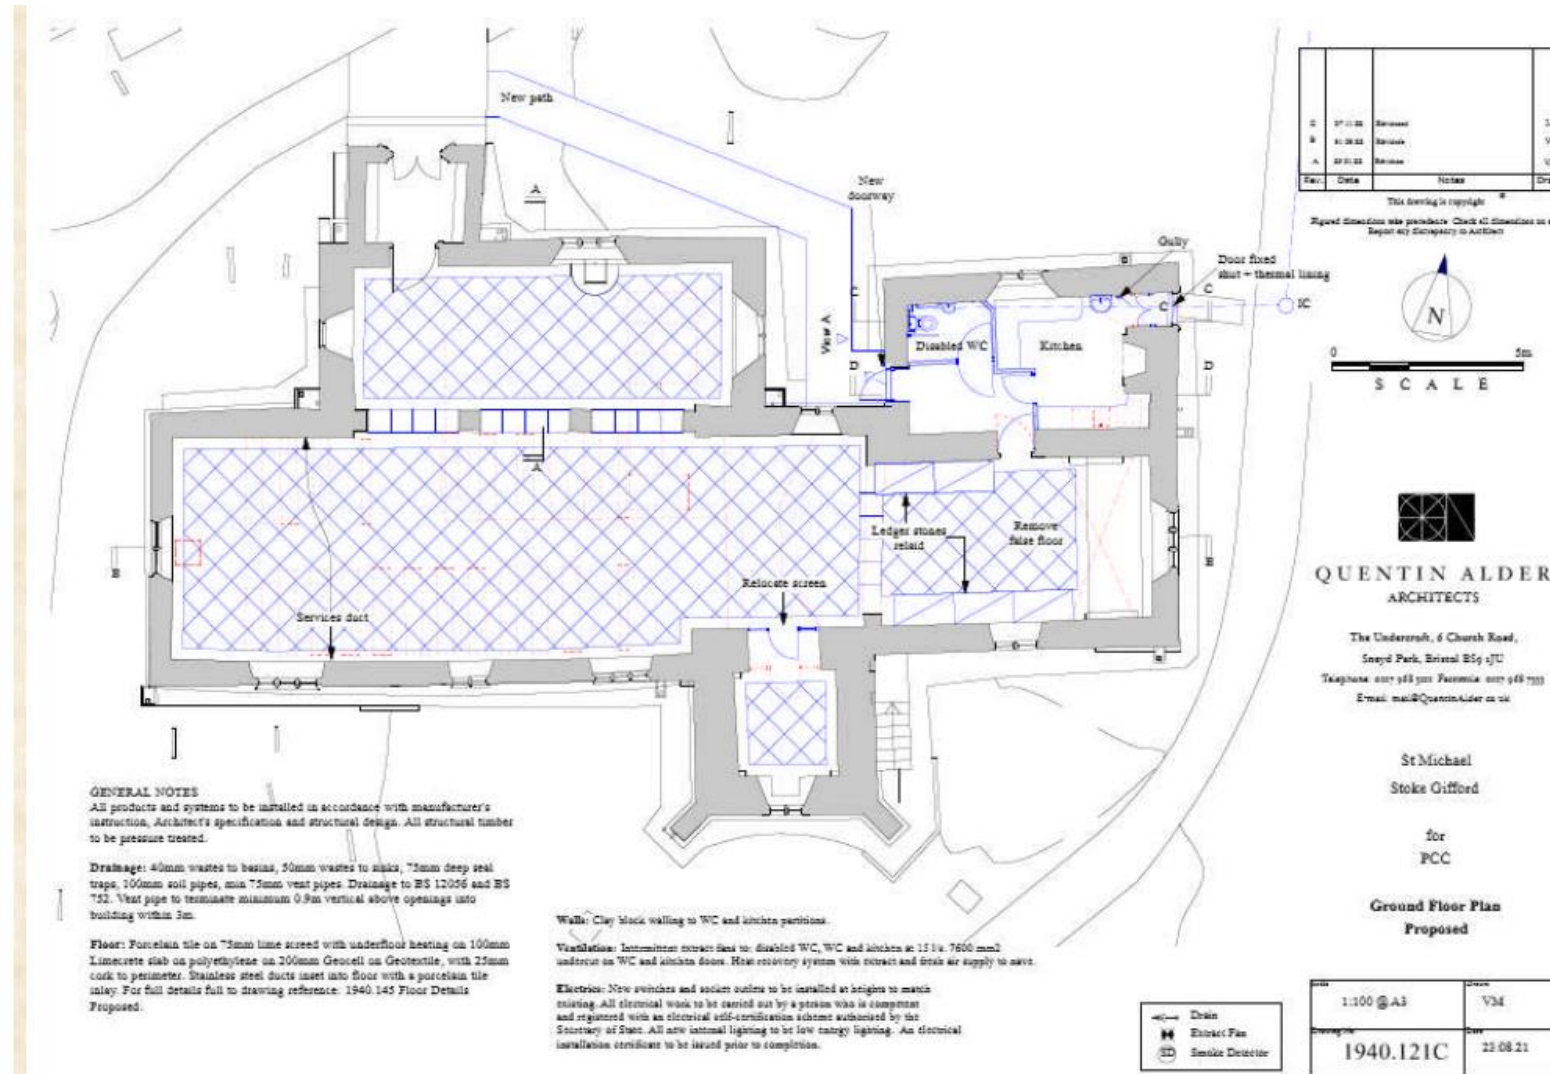

Progress

- DAC approval not complete, the response to the latest submission has cleared up all but one point: use of an Air Source Heat Pump or similar instead of a gas boiler
- Awaiting DAC signoff before considering getting new quotations
- Realistically quotations will be sought when there is confidence of the availability of funding to deliver the project

Changes in scope

- Pillars will no longer be removed due to historical significance
- Only one accessible toilet will be built in what is currently the vestry
- A mechanical air handling unit will be installed in the ceiling void in the nave. This improves the ventilation of the building and the efficiency of the heating system.
- The door to the current vestry will remain as it is, i.e. it won't be moved

Revised overall floorplan

Toilet/Servery
